

Project: Echoes of Time – A History Website

Time: About 3 hours

What to Use: Only HTML

(No CSS, No JavaScript, No Forms)

What You're Building

Create a **website with 4 connected pages**.

Each page should show something about a **past time**, a **person**, **things left behind**, and **how we remember it today**.

You decide the topic (real or fictional).

The site should feel like a small **online museum** or **history story**.

Pages You Need

You must have **4 separate HTML files**.

Each one should be about one part of the story. For example:

- `origins.html` – how it began
- `figures.html` – who was involved
- `artifacts.html` – what objects were left
- `legacy.html` – what still remains or is important today

You can name the files anything you want — but all should **connect** and tell a full story.

Links and Navigation

Every page must:

- Link to the other 3 pages

- Have a clear menu at the top or side using `<nav>`
 - Use internal links (`#something`) for jumping inside the same page
-

What to Show

Use these elements in your pages:

- At least **2 types of media**, like:
 - Pictures (``)
 - Videos (`<video>`)
 - Audio (`<audio>`)
 - Map (`<iframe>`)
 - A **gallery** of pictures or objects
 - A hidden section that opens with a link (like a pop-up) using only HTML (`<a href="#..." + :target` or `<details>`)
 - A small quote from a person, book, or story using `<blockquote>`
-

What to Include

Each page must:

- Have a title (`<h1>`) and other headings (`<h2>`, `<h3>`)
- Have at least **300 words of your own text**
- Use semantic tags like `<section>`, `<article>`, `<aside>`, `<figure>`, `<footer>`, etc.
- Describe your images using `<figcaption>`

- Show 3 or more items that a visitor can explore (using `<details>` or anchor links)
-

✨ Bonus Ideas (Optional)

- Show a timeline or prices using a `<table>`
 - Add a list of terms using `<dl>`, `<dt>`, `<dd>`
 - Use language tags (`<p lang="fr">`) for short texts in other languages
-
